

The Leicester and Leicestershire Economy in 2024

Images include the National Space Centre, Leicester, and MIRA Technology Institute, Hinckley

Introduction and summary

This report aims to describe the current economy of Leicester and Leicestershire (the LLEP area), highlighting the dominant industries, the occupations within those industries and the skills required by the local economy.

The report also includes how demand for skills has changed in the previous five years and which sectors are more prevalent locally compared to the rest of England. The report also looks to the future and considers which sectors will continue to grow and where future demand may be.

Two sectors emerge from the analysis as locally significant:

Manufacturing:

- Second highest industry with far more jobs than national levels (figure 1)
- Process, Plant and Machine Operatives far higher than national (figure 2)
- Machinery skills far higher demand than national (figure 3)
- Second highest total wages and high wages per capita (figure 8)

Logistics:

- Transport and Storage has far more jobs than national levels (figure 1)
- Greater Elementary jobs and huge demand for Warehousing skills (figure 2 and 3)
- Warehousing skills showing fast growth (figure 4, 5 and 6) and growth in Transportation and storage jobs (figure 6)
- Large forecast growth (figure 7)

However, the second theme is the often-unseen presence of 'white collar' jobs which are large in both volume and demand:

- 'Professional' is the largest occupation but far behind national levels. Associate Professional and Technical; and Administrative and Secretarial are also both large and behind national levels (figure 2)
- Specialised Financial, Accounting and Auditing skills all high volume but below national levels (figure 3)
- Finance and Accounting skills second and fourth respective in skills demand (figure 3)
- Professional, Scientific and Technical Activities high total wages and per capita (figure 8)

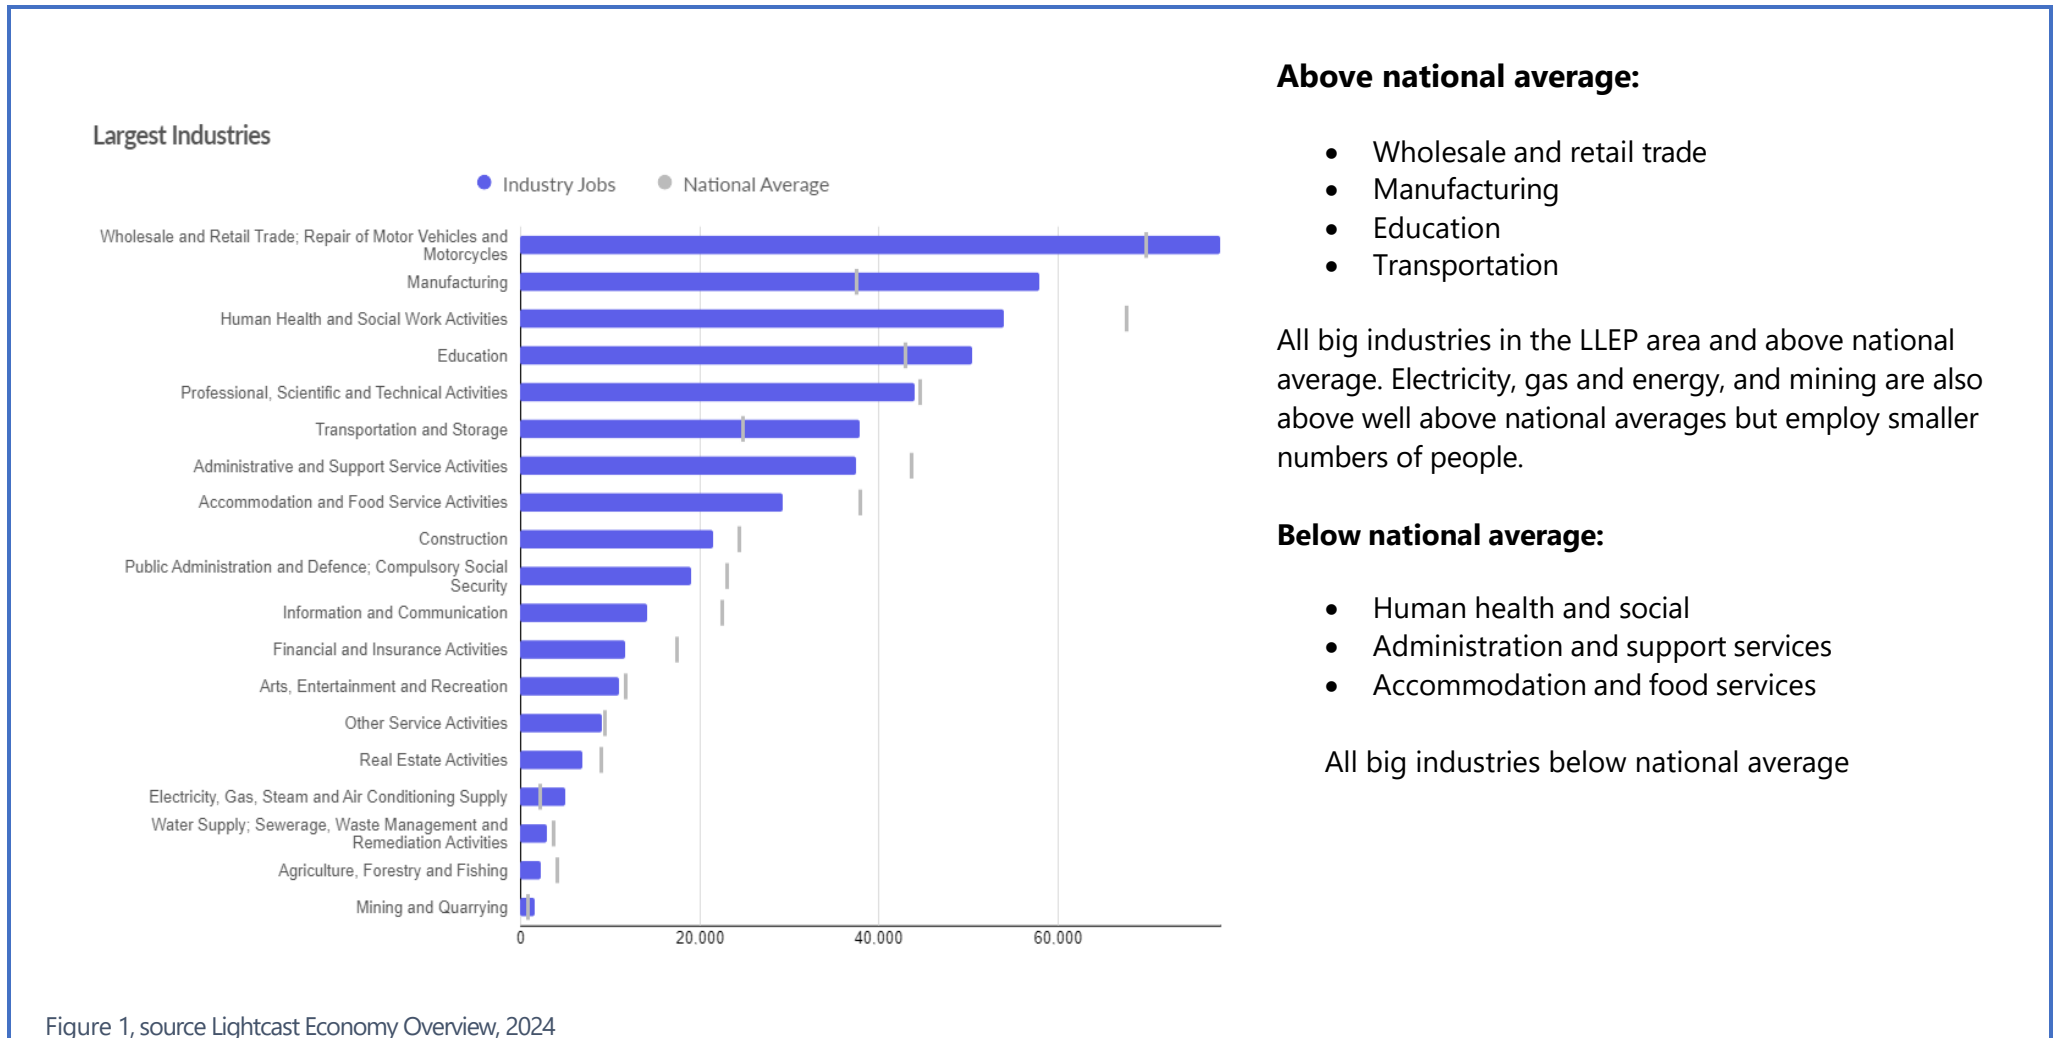

Contents

1. Largest Industries	6. Change in demand for specialised skills
2. Largest occupations	7. Forecast of future economy
3. Top specialised skills	8. Total wages per industry
4. Skills demand change	9. Wages per capita
5. Job change by industry	10. Advertised vacancy trends
	11. Data sources

Setting the scene

The largest industries in the LLEP area compared to national levels

The chart below shows the largest industries in the LLEP area (blue bar) and how they compare to the national picture (grey line):

The most common occupations in the LLEP area compared to the national picture

Largest Occupations

Above national average:

- Elementary and process
- Plant and machine roles
- Skilled

These occupational areas include logistics and manufacturing, known large sectors in Leicestershire.

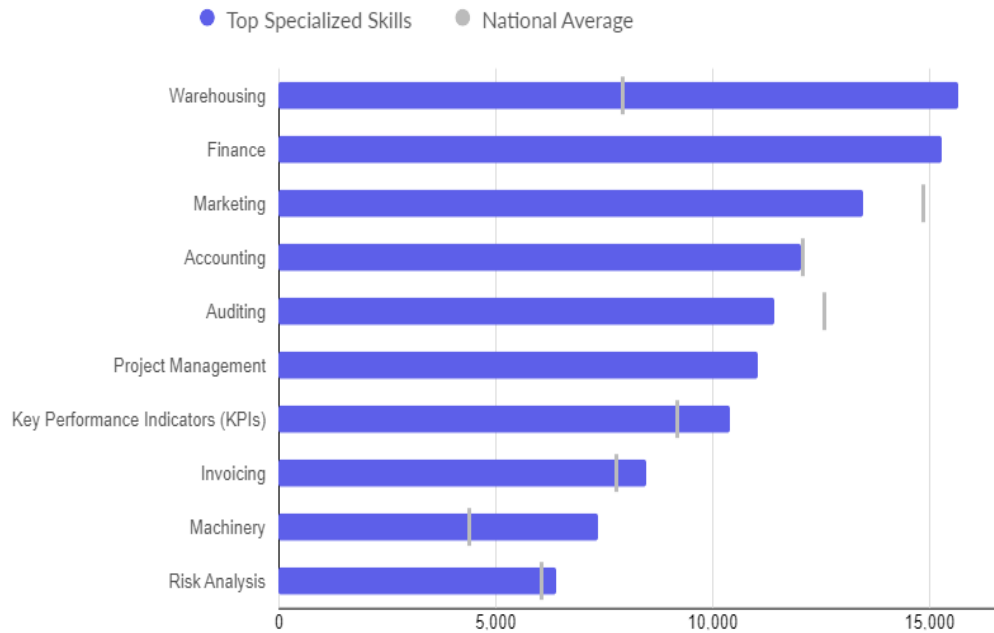

Below national average:

- Professional occupations
- Associate Professional and Technical roles
- Administrative and Secretarial

Many of the sectors below national level could be viewed as 'white collar occupations'

Figure 2, source Lightcast Economy Overview, 2024

Top specialised skills - LLEP area compared to national average

Above national average:

Warehousing and machinery are significantly above national averages – and both are a clear characteristic of the LLR economy

Below national average:

Finance, marketing, project management and auditing are all significantly below national average.

This aligns with previous information that 'white collar' occupations have lower prevalence in the LLEP area.

Commentary

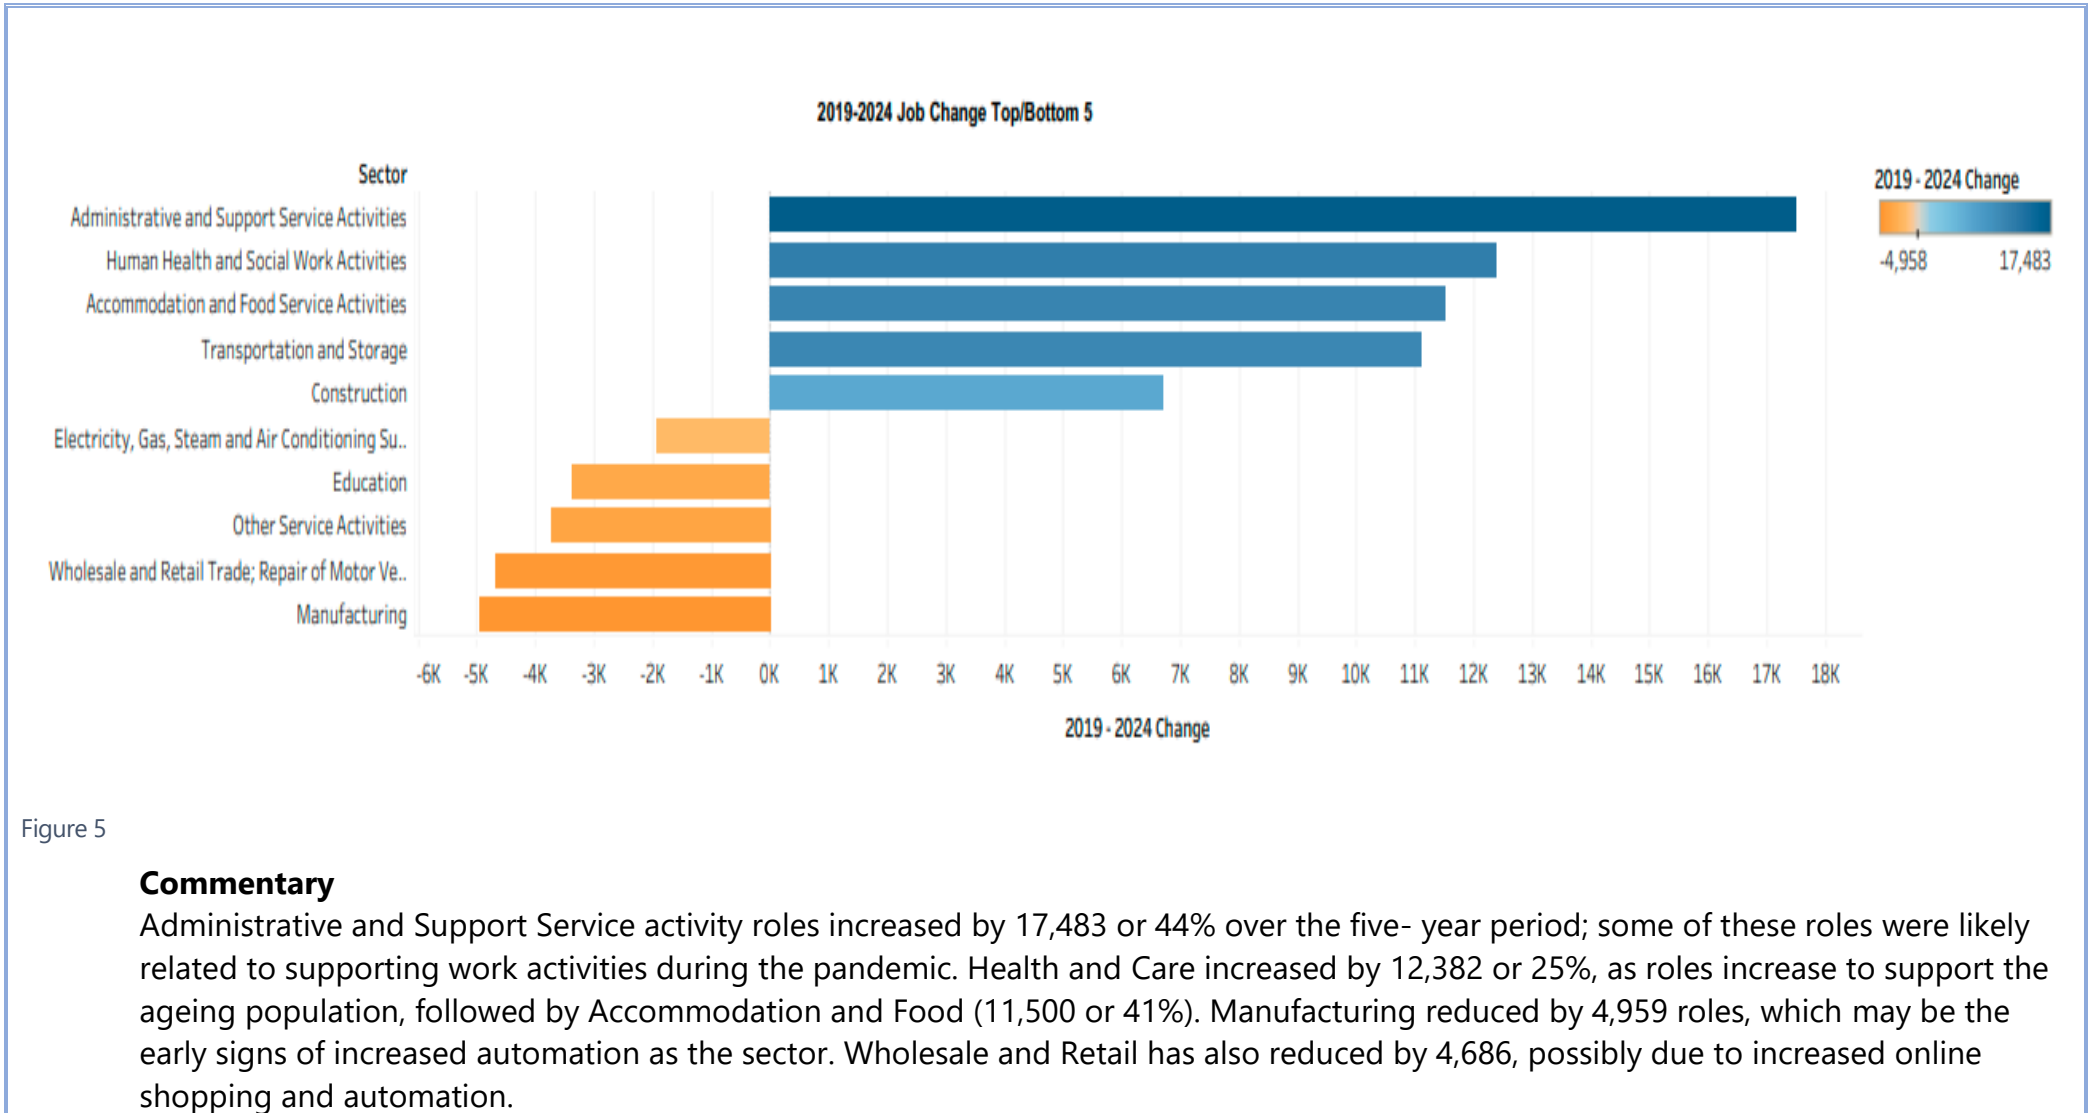

Job roles involving warehousing skills have been high over the past few years – but note in the past year the growth in finance and auditing.

Project management, accounting, marketing, and KPI skilled roles are also consistently LLEP area most sought after skills.

Figure 4, source Lightcast Economy Overview , 2024

Job-change by industry 2019 – 2024

The graph below shows the top 5 sectors for job increases and job decreases:

Change in demand for Specialised Skills 2019-2024

The graph shows the specialised skills that have grown or reduced in demand over the past 5 years:

Top 10 Increases –

Finance (+65%), and Auditing (+94%) are two large skill areas in high demand.

There are also exponential increases in postings involving Accounting (+94%), Invoicing (+59%), Effective Communication (+221%), Customer Relationship Management (+110%) and Warehousing (+67%).

Bottom 10 Increases -

It is notable that several of the 10 bottom specialised skills are computer programming languages / software skills. This does not necessarily suggest reduced demand for IT skills in general but that skills demand changes in the sector as different languages and software are used.

Hot and Cold Skills by Job Postings

Figure 6, Lightcast job postings skills analysis, 2024

Forecast of future economy

Predicted changes by industry 2024-2030 (location quotient changes)

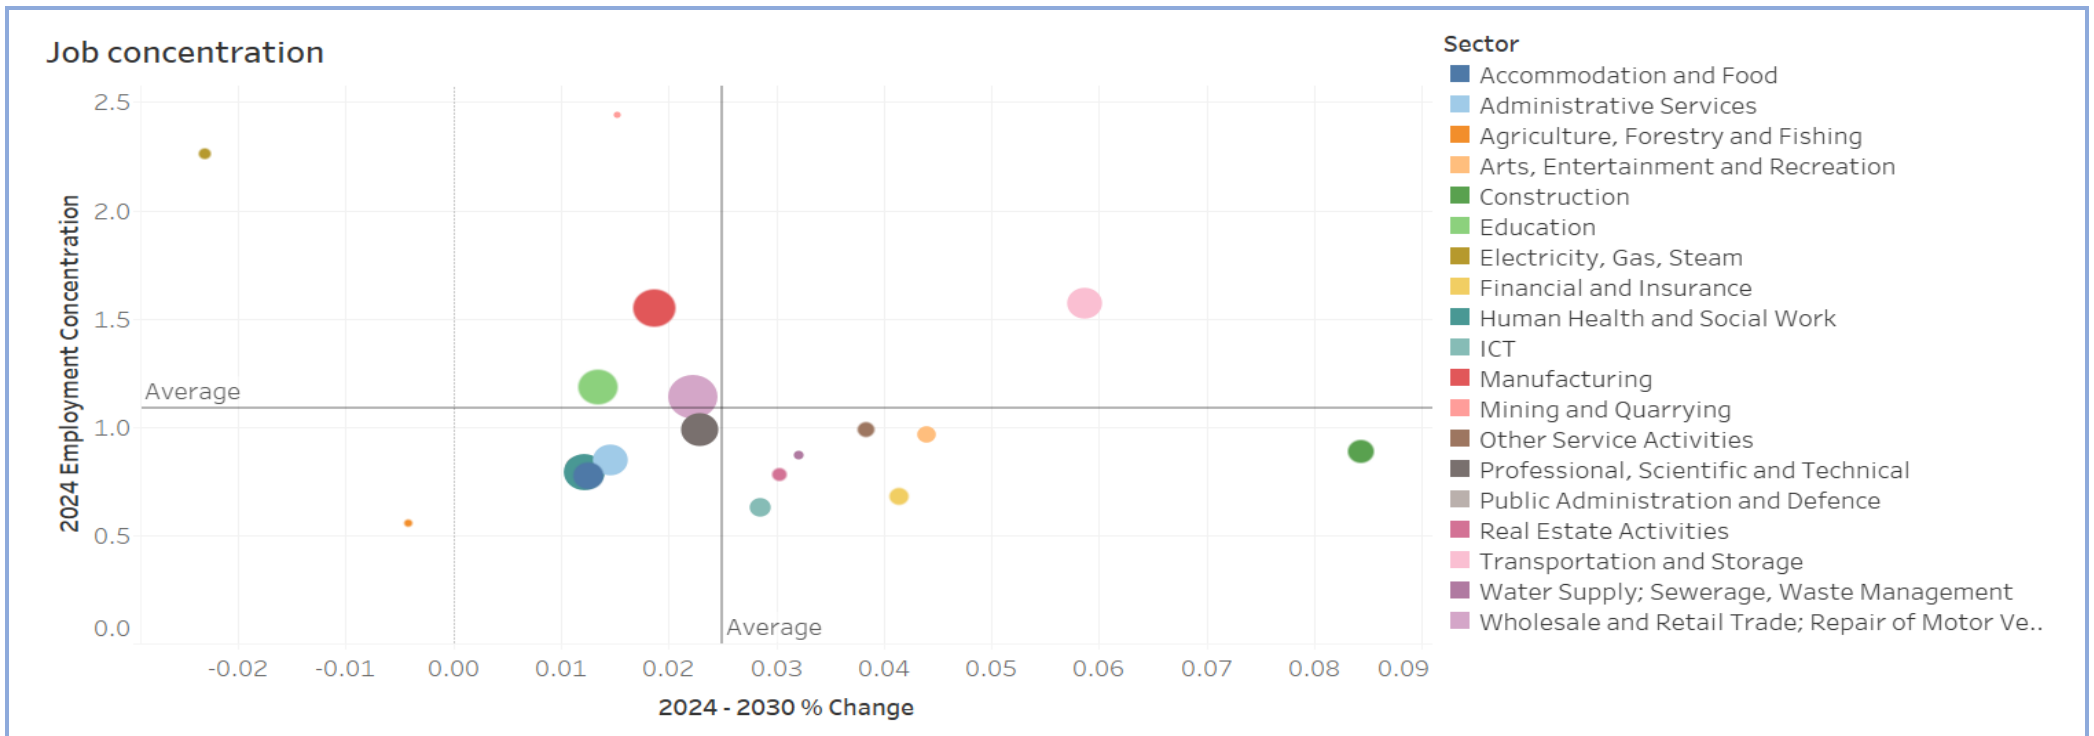

Figure 7, Lightcast location quotient and sector growth, 2024-2030

Transportation and storage look to be the growth industry for LLR in the next ten years, with both a strong LQ in 2024 and a positive rate of change for the LQ over the next 10 years.

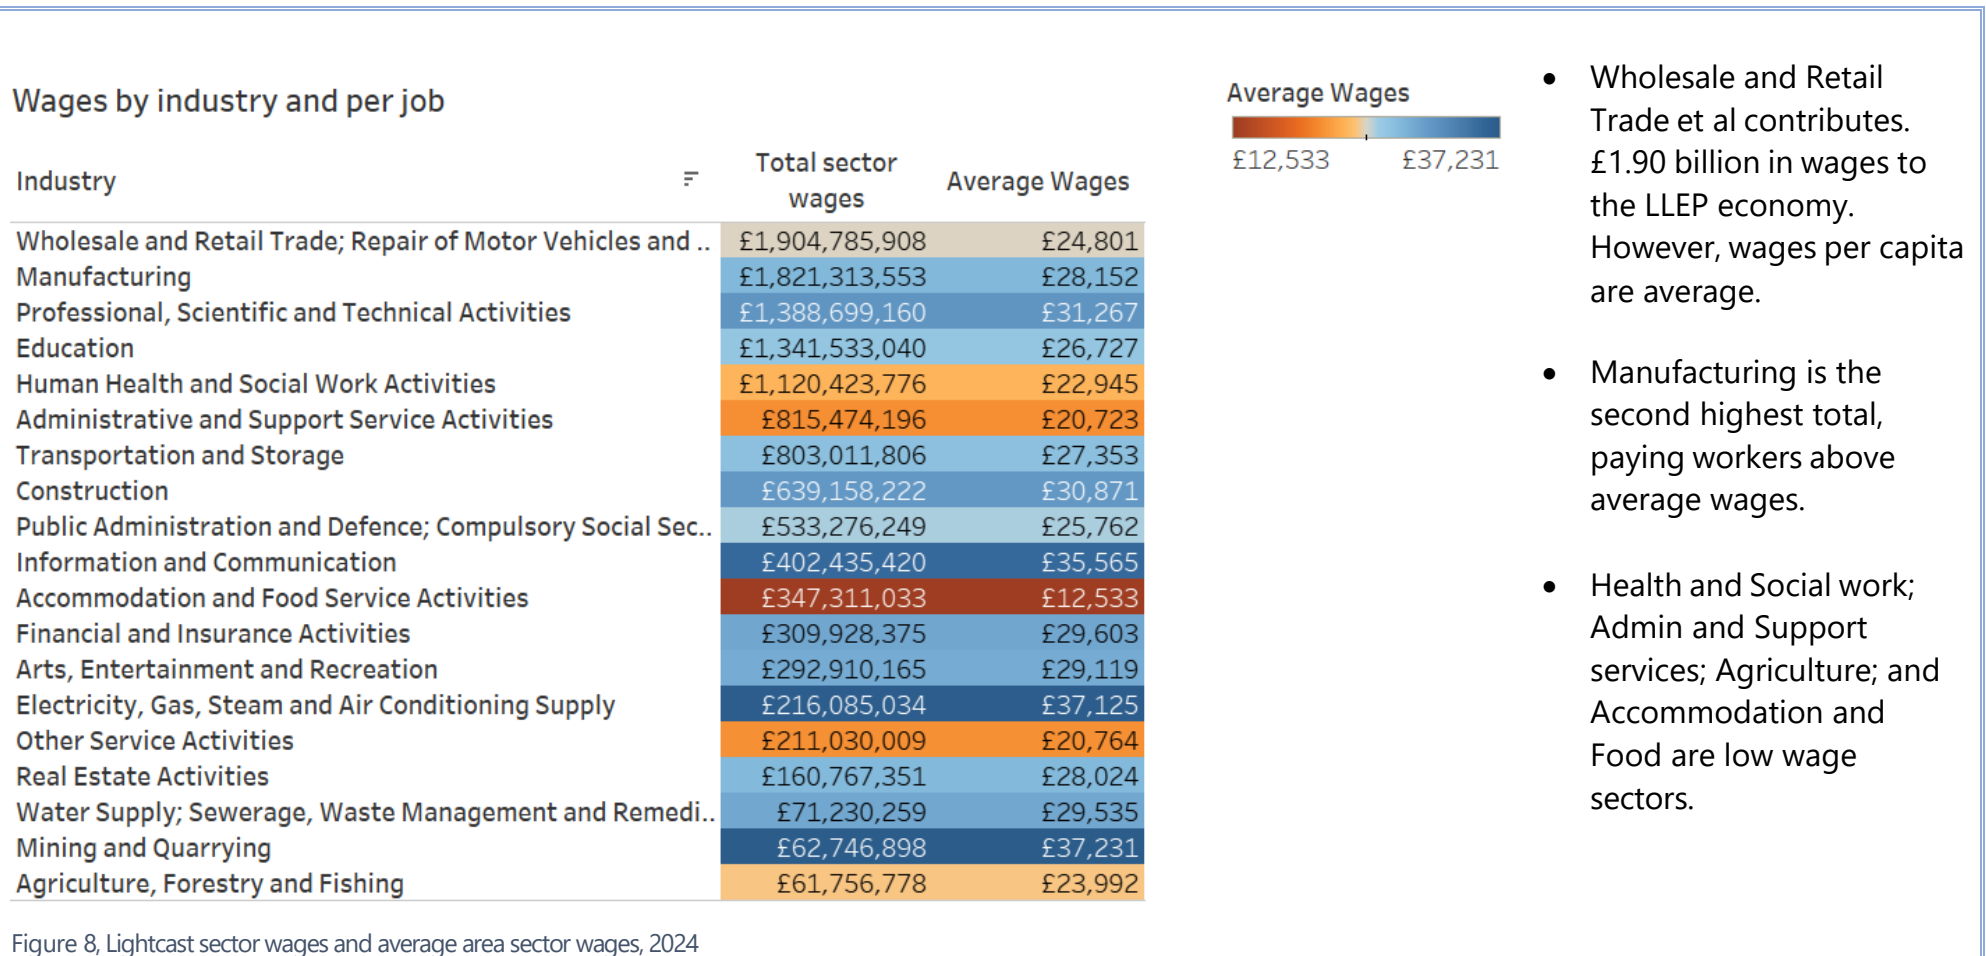

Manufacturing is an industry that posts a strong LQ in 2024 but that is predicted to decrease a little by 2030.

Construction has the highest growth in location quotient but is still under national averages.

Financial data

Total wages per Industry in the LLEP area

The graph below shows total wages paid per industry and is coloured by the average wage per capita. For example, although Manufacturing has fewer total wages than Whole and Retail Trade et al, average wages in the Industry are higher.

Wages per capita compared to Jobs

Commentary

Professional, Scientific and Technical Activities job roles; Transportation and Storage; as well as Manufacturing roles are above average in both wages per capita and total jobs in the LLEP area.

Electricity et al and Mining and Quarrying are the highest paying sectors on average but employ low numbers of people (but still significantly higher than other areas on average).

Accommodation and Food Service Activities is one of a few industries above average in terms of total jobs, but below the wages per capita average LLEP sets. Other industries include Administrative and Support Service Activities and Human Health and Social Work Activities.

Wages per Capita

Job Posting Trends

The graph shows the trend in Leicester and Leicestershire job vacancies posted online since April 2019.

Data Sources

All data points have been sourced from economic modelling specialist Lightcast, who collate accurate and up-to-date labour market data from various sources, including the following datasets:

Annual Business Inquiry (ABI) • Annual Population Survey (APS) • Annual Survey of Hours and Earnings (ASHE) • Business Register and Employment Survey (BRES) • Department for Environment, Food and Rural Affairs (DEFRA) • Labour Force Survey (LFS) • Working Futures (WF) Workforce Job Series (WJS) • Office for National Statistics (ONS)

These sources are collected and combined to create Lightcast's industry and occupation data, as well as staffing patterns used to connect the two.
